Division of Information Technology

DOCUMENTATION OF WEBSITE

As every website has the basic buttons like home, about us, contact, etc., we have also added the buttons that are required for users to get most of our website. Every webpage on our website contains 5 basic buttons:

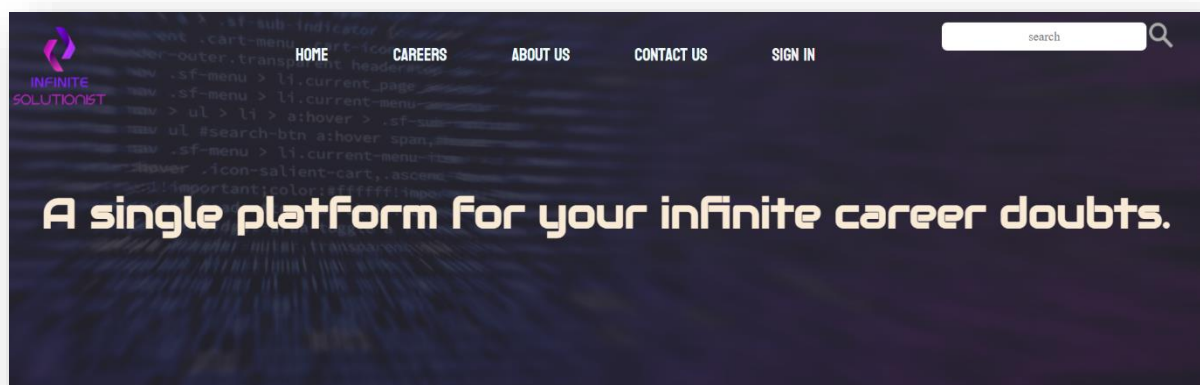

- Home
- Careers
- About us
- Contact us
- Sign in

All these buttons are accessible on all web pages and can be used for navigating through different web pages. Now let's see the basic structure and functions of each web page.

- **Home Page**

The home page is the main webpage of our website. The home page is divided into four sections for which we have used the <section> tag. The four sections are explained as follows:

- Top section or Header:

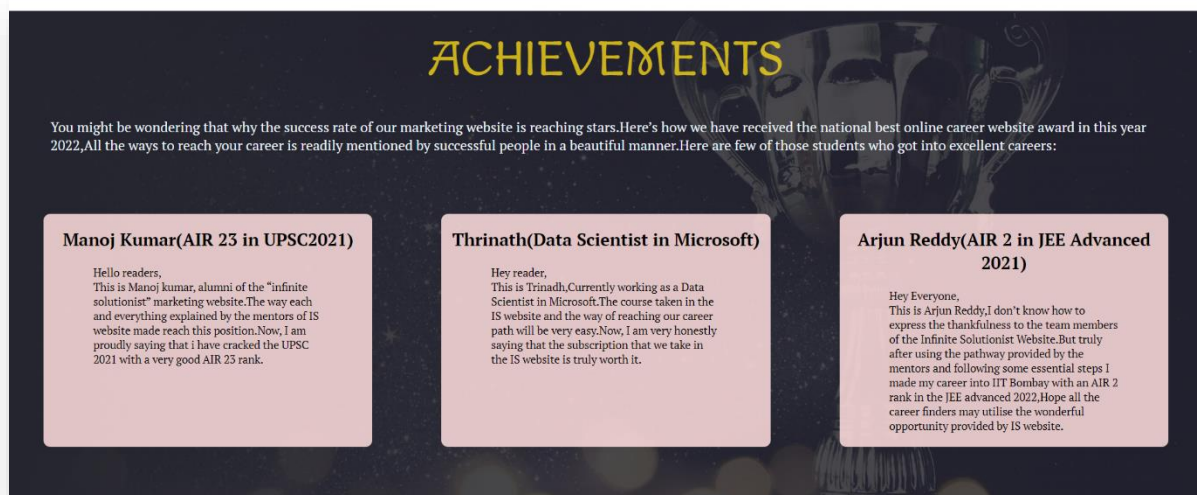

In the top section of the home page, first, we see the logo of the website in the top left corner. The logo is interactive on all web pages. On clicking the logo u will be navigated to the home page of the website.

Then we see 5 buttons next to the logo. These buttons are interactive buttons, which help users to navigate to the indicated web page e.g., on clicking the careers button users will be navigated to the careers web page.

Then we come across the search bar in the top right corner which will be used to search through our website.

Then we have the aim and goal of our website written.

➤ Achievements section:

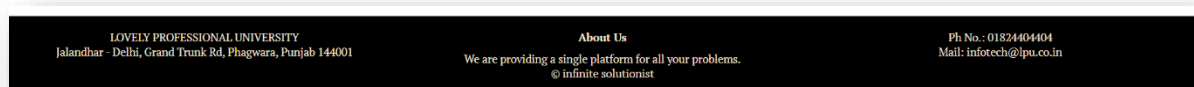

This section of the home page shows various achievements achieved by our students and/or mentees. Hence showing why the user should consider taking our courses. It also quotes a few words of our achievers and what they gave to say about our courses and their experiences with us.

➤ Articles section:

This section of our webpage shows different articles which were written in our appreciation in the various leading newspapers along with some parts of the article.

➤ Bottom section or Footer:

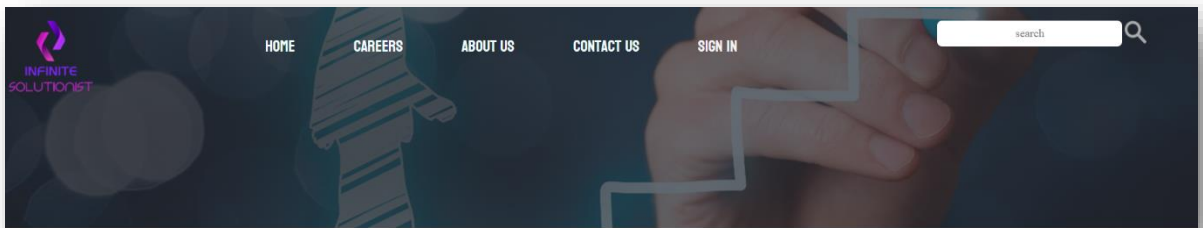

This section of the webpage shows the address, contact information, and copyright of our website.

- **Careers Page**

Here's the second main page of our website which provides the user with to access the respective career path. This page is divided into three parts:

- Top section or header

This part of the web page is the same as the top section of the home page. In the top section of this page, first, we see the logo of the website in the top left corner. The logo is interactive on all web pages. On clicking the logo you will be navigated to the home page of the website.

Then we see 5 buttons next to the logo. These buttons are interactive buttons, which help users to navigate to the indicated web page e.g., on clicking the careers button users will be navigated to the careers web page.

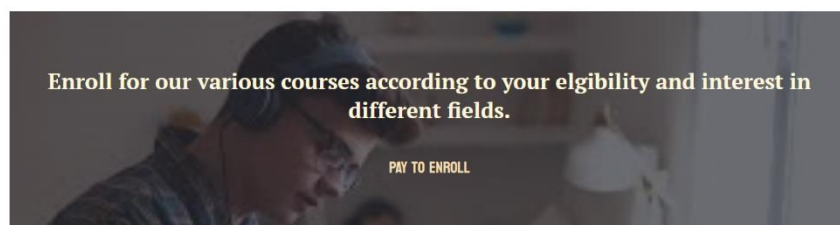

Then we come across the search bar in the top right corner which will be used to search through our website.

- Courses section

This is the main section of this webpage which provides the user to access the respective career path such as all the computer languages such as HTML, CSS, JAVASCRIPT, C++, JAVA, etc..., and there are the briefings given at respective clicks and this almost similar to a website called "Geeks for Geeks". And the user can access whatever the content he wants to access

according to his career path and there is a button below all the courses which says “More” which elaborates the content of every course mentioned on the career page and everything like search bar and all the other icons are also available to make the webpage more user friendly.

There is one more section along with a button “PAY TO ENROLL” that will lead to the payment page where the detailed price and duration of each course will be given.

- Bottom section or footer:

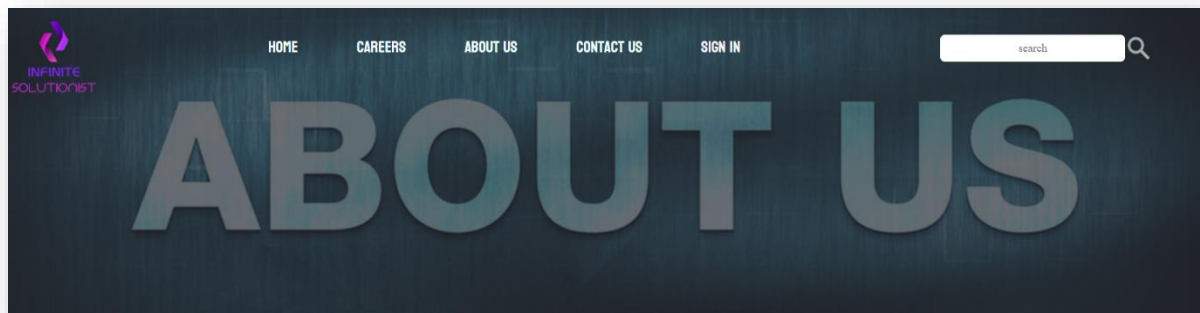

This section of the webpage shows the address, contact information, and copyright of our website.

- **About us Page**

Like all other pages about page is also divided into three sections:

- Top section or header:

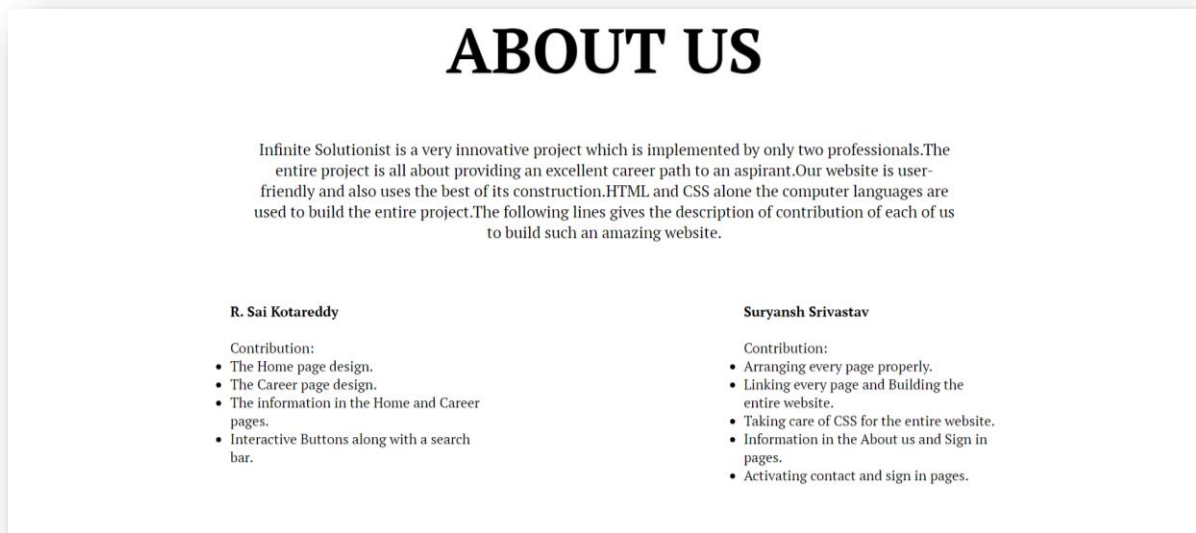

The top section of this page is similar to the previous pages. In the top section of this page, first, we see the logo of the website in the top left corner. The logo is interactive on all web pages. On clicking the logo you will be navigated to the home page of the website.

Then we see 5 buttons next to the logo. These buttons are interactive buttons, which help users to navigate to the indicated web page e.g., on clicking the careers button users will be navigated to the careers web page.

Then we come across the search bar in the top right corner which will be used to search through our website.

➤ Middle section:

When we come to this part of the page it's like every other website which gives the information of the team members of the website construction and the contribution towards the birth and working of the website and I should say that this is the least useful part of our website. Because it doesn't have to do anything with the user interaction but still it's on our website which gives an insight into what is what.

➤ Bottom section or Footer:

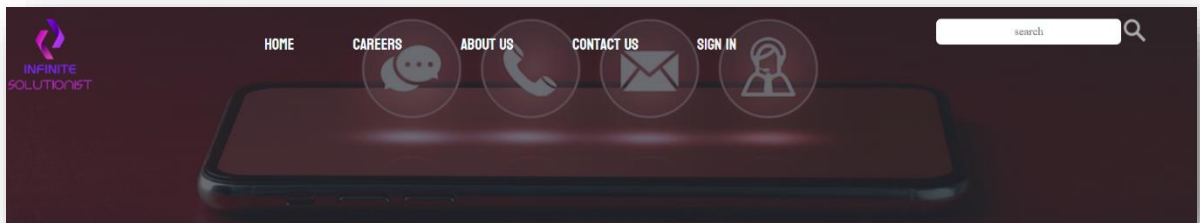

This section of the webpage shows the address, contact information, and copyright of our website.

- **Contact us Page**

Currently, and even if the whole website is free of bugs there might be some issues regarding the user interaction which makes a user uncomfortable that is where our technical team comes into the picture, we have given the contact information along with email id and call support as well which makes the user more comfortable using the most out of our website. Like all webpages Contact Us webpage is also divided into three sections:

- Top section or header:

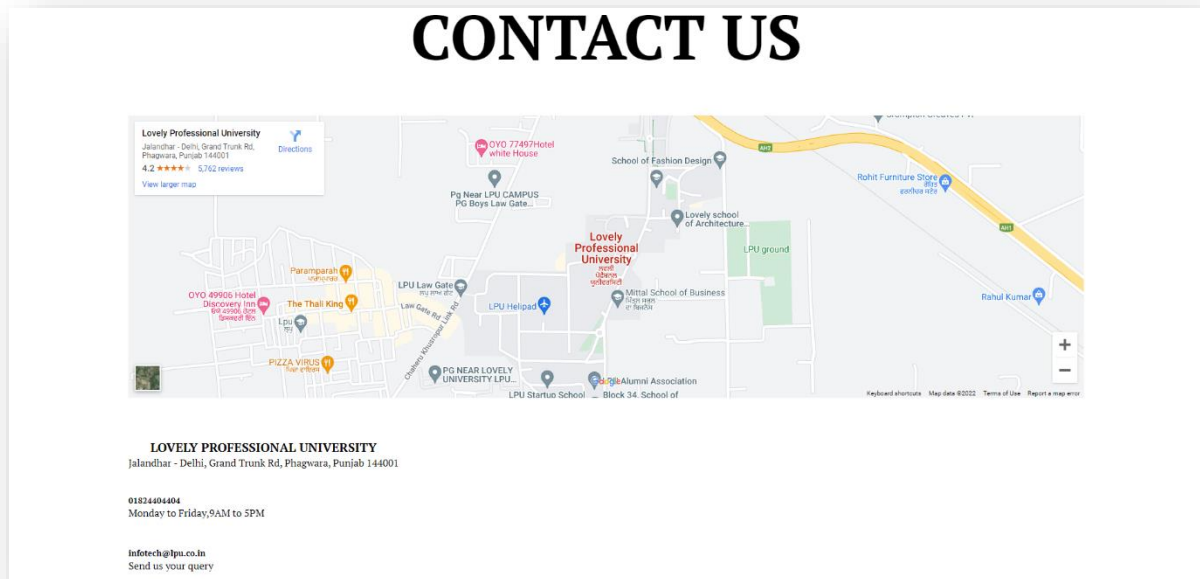

This part of the web page is the same as the top sections of the previous web pages. In the top section of this page, first, we see the logo of the website in the top left corner. The logo is interactive on all web pages. On clicking the logo you will be navigated to the home page of the website.

Then we see 5 buttons next to the logo. These buttons are interactive buttons, which help users to navigate to the indicated web page e.g., on clicking the careers button users will be navigated to the careers web page.

Then we come across the search bar in the top right corner which will be used to search through our website.

➤ Middle section:

In this section, first, we see a snapshot of functional google maps. Its shows our address to the users.

The snapshot is followed by an address written in words which is also our postal address. Below it we can find the mobile number and Gmail to contact us.

➤ Bottom section or Footer:

This section of the webpage shows the address, contact information, and copyright of our website.

- **Sign In**

Like every popular website we Infinite Solutionist team members are very conscious of our customers' security and trust that's why we have created an optimized sign-in page where users will be able to log in to our website using their credentials. This will provide the user with safety and security features as well. Currently, since our website is not uploaded on the server so it takes you to the Google sign-in page.

INDIVIDUAL RESPONSIBILITY

Reddem Sai Kotareddy:

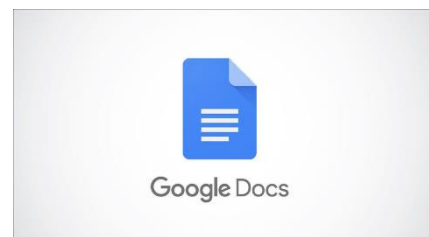

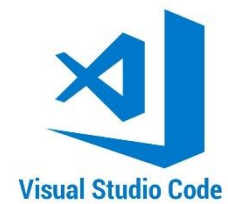

- Created blueprint
- Created Home and Careers page
- Made some part of the report
- Collected media for the website
- Responsible for HTML part
- Helped in graphics
- Helped his partner

Suryansh Srivastav:

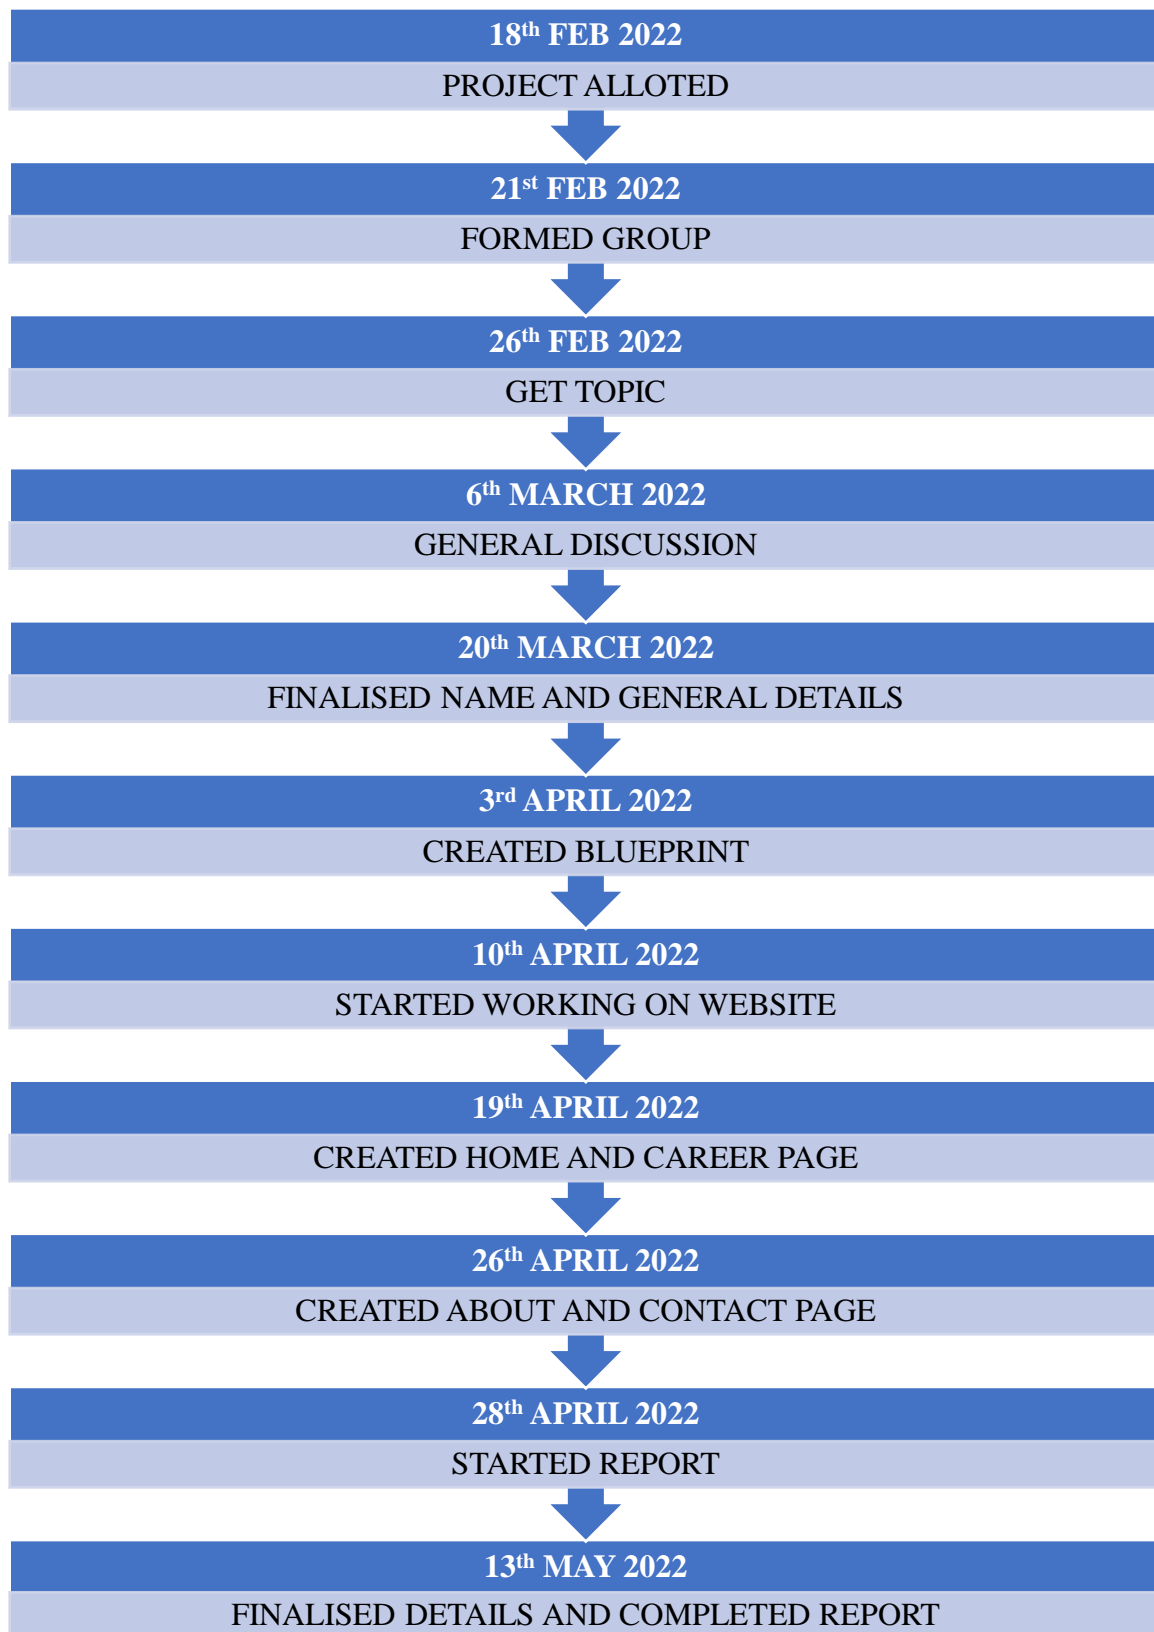

- Created blueprint
- Decided website name and logo
- Made some part of the report
- Made contact and about us page
- Responsible for overall graphics
- Responsible for CSS design
- Helped his partner

TECHNOLOGIES USED

- HTML
- CSS
- Google fonts
- Visual studio code
- Logo maker apps
- MS word
- Google docs
- Paint

TIMELINE

SWOT ANALYSIS

As we all know that there are both strengths and weaknesses of anything present in this entire universe. Now, let's discuss some of the most important features and their pros and cons of using them.

Strengths

The strength of our website is the customers that believe in us and give us the benefit of trust along with benefiting themselves with the enormous content available on the website. One more important aspect of the website is that the content available on the website is free of cost and only some parts of the web content are paid that too in a very reasonable price which is affordable by every single career aspirant. Finally, these are the strengths of our website.

Weaknesses

As our Strengths are on the huge side there is a minimum number of the weaknesses that we are having currently, and I think that they can be reduced with the time. The major drawback of our website is that the Sign-in system is not still updated which makes the user more uncomfortable using the paid web content apart from the sign-in page everything seems more perfect than anything. Currently, it leads to the google account sign-in page. This is the only drawback of our entire website which will be soon rectified as we upload it on the server.

Opportunities

When it comes to the opportunities available on our website, It never steps back anytime because all the motivation and intent of the creation of this particular website is to provide a wide number of opportunities to the career aspirants we have multiple career selections which can be selected from careers webpage and access all the content with minimal charges. There is a wide number of opportunities for all the age groups with all the support from the mentors. Thus, I conclude that there is a wide number of opportunities for a good career aspirant on our “INFINITE SOLUTIONIST” website.

Threats

When we talk about the threats that are present in the use of our service I can proudly say that, There are ZERO threats because all the content we provide is purely helpful and we don't promote any bad ideas to the society which makes us unique in terms of our success rate. I can say that we have some weaknesses which will be surely rectified but I am confidently saying that this website is free of threats.
